

Faculty of Engineering
Study programme offered in English

Study programme: MACHINE OPERATION MANAGEMENT

Degree: Bachelor

Language: English

Faculty: Faculty of Engineering

About the programme:

The study programme consists of six semesters. All the courses of this study programme will be held in English. The curriculum covers major aspects of conducting business, machinery trading, and the operation management of machines and technical systems in agri-food production and business companies. The emphasis is put especially on the study of possibilities and ways of acquiring machines and their effective operation. The study programme is supported by courses of economic nature.

Students will become familiar with preparing and implementing of business plans in technical investment policy as well as with business in machines, including advisory and logistic activities and servicing.

Graduates are able to obtain positions in companies providing commercial technical services, in the area of machinery leasing in industry, agriculture, food industry, servicing and selling centres of companies providing the import and distribution of foreign machines and equipment, in public administration and regional institutions dealing with investment policy, the management of commercial technical services, and machinery trading.

Tuition fee: EUR 2,000 / academic year
